PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building enterprise software solutions, backend integrations, and AI-powered applications. Strong foundation in Core Java, object-oriented design, REST services, testing, and problem solving. Passionate about code quality, software craftsmanship, and building reliable systems in collaborative engineering environments.

EXPERIENCE

PwC India – Gurugram, India

Aug 2023 – Present

Senior Technology Consultant

- Developed and maintained backend integrations and **REST**-based workflows across Salesforce, ServiceNow, and Jira, supporting enterprise-scale automation solutions for multiple clients.
- **Designed, tested, and optimized** LLM-powered services using **Azure AI** Foundry and Copilot Studio, developing modular components for intelligent classification, conversational workflows, and domain-specific automation.
- Built and maintained reusable automation workflows and service integrations, reducing manual effort while improving reliability and maintainability of operational processes.
- Managed AWS infra of India's biggest car manufacturer, collaborated with cross-functional teams to understand requirements, deliver software solutions, and continuously improve system quality through testing, feedback, and iterative enhancements.

PROJECTS

Healthcare Assistant

Nov 2025 – Dec 2025

Python, Azure OpenAI, Azure AI Foundry, OCR

- Built an **LLM-powered backend** system using Azure OpenAI to analyse medical documents, extract structured clinical findings, and generate decision outputs, handling multi-stage inference across **OCR, parsing, evaluation, and risk scoring pipelines**.
- Designed a modular multi-stage processing pipeline for OCR, data extraction, clinical evaluation, and AI-based decision support with a focus on maintainability and extensibility.
- Deployed AI models using Azure AI Foundry and exposed inference capabilities through API interfaces consumed by downstream workflows.

Console Chess Engine

Sep 2025 – Oct 2025

Java, Maven, JUnit

- Implemented a complete chess engine supporting **castling, en passant, pawn promotion, and check/checkmate/stalemate** detection.
- Designed layered architecture with immutable domain models and clear separation between game logic, board state, and player interaction layers.
- Applied object-oriented design principles, design patterns, and clean architecture practices to build a maintainable and thoroughly tested software system.
- Implemented comprehensive **JUnit** tests covering game rules, state validation, and edge cases to ensure correctness and maintainability.

EDUCATION

Veermata Jijabai Technological Institute (VJTI) – Mumbai, India

Aug 2019 – May 2023

Bachelor of Technology, Electrical Engineering — CGPA: 8.26 / 10

SKILLS & PROBLEM SOLVING

Languages: Java, Python, C++, SQL (basic)

Core Skills: OOP, Low Level Design, Design Patterns, Multithreading, System Design (LLD/HLD), DSA, REST APIs, Testing, Debugging

AI / ML: Azure OpenAI, Azure AI Foundry, LLM Integration, Model Fine-tuning, Inference Pipelines

Cloud / Platforms: AWS(Exposure), Azure, Git, GitHub, CI/CD (exposure), LangChain (familiar)

DSA: Solved 500+ problems - LeetCode 200+ and GeeksforGeeks 300+ (GFG score: 1000+)

ACHIEVEMENTS

- Won Microsoft Hackathon for building enterprise-grade AI agents.
- Awarded AI Champion recognition within PwC.
- Hosted and delivered 30+ technical sessions on Microsoft Copilot development.
